

Caring for your Spray Finish:

Milesi Products:

You have chosen a 2k urethane commercial spray finish for your table. Milesi is the highest quality table finish on the market. It is food safe and durable, and the most beautiful spray finish in the industry. Our independent testing has shown stain resistance from highly acidic food stains for up to around 10-20 hours on the surface, and about 8 hours for ice water rings... but that doesn't mean placemats and coasters aren't your friends, and timely cleaning and wiping of stains and spills is encouraged.

Cleaning:

Milesi 2k Urethane Finishes can be cleaned with chemical cleaners, like pine-sol and bleach cleaners, but it's not necessary and over decades, chemical cleaners will wear at a finish more than natural cleaners. In general, placemats, coasters, trivets, and cutting boards are recommended always. Use them. Try not to leave stains on your table to sit for very long, as they will harden. Then you will have to scrub harder to remove them. If you use a very abrasive pad or sponge to clean your table, it will soften the sheen of your finish. Natural cleaning soap (like Mrs. Meyers, 7th Generation, Method) and water and timely cleaning will allow your table to remain in pristine condition for a long time. If a stain has hardened, soak it first with soap and water and then try to wipe it away with the softer the sponge.

Refinishing:

Refinishing a spray finish is an expensive process and will require the table go out to a professional shop. Contact a professional for pricing.
